Heavy Gear — WASD controls

Keyboard + mouse layout · install with patcher/hg_controls.py

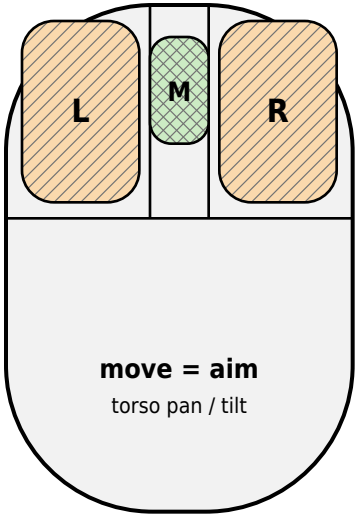

⇧ line on a key = what it does with Shift held. “Thr 2” = throttle preset 2. Ctrl+Z = reset zoom. Keypad / and * with NumLock fire groups 1–3 as before.

Arrow keys keep the original layout: Up/Down move, Left/Right turn legs, Shift+Left/Right strafe, Ctrl+arrows look.

Esc and F1–F12 are unchanged (grey keys). Autopilot moved A → O and cockpit view C → V to free those keys.

Heavy Gear — WASD controls

Mouse, install and undo

MOUSE

Left click	fire weapon
Right click	cycle weapon
Middle click	target what you aim at
Mouse move	aim torso left/right and up/down

SHIFT / CTRL AT A GLANCE

Shift + W / S	run instead of walk
Shift + C	stand up (C alone crouches)
Shift + T / Y / U / N	previous target/enemy/friend/nav
Shift + Z / X	zoom out / radar zoom out
Shift + 1 / 2 / 3	add weapon to group 1 / 2 / 3
Ctrl + Z	reset zoom

Torso aim is independent of the legs: use A/D to turn the legs, F to snap them to the torso.

UNCHANGED

Arrow keys: original layout (Up/Down move, Left/Right turn legs, Shift+Left/Right strafe, Ctrl+arrows look).
F1–F12 and Esc: unchanged (comms menus, displays, main menu).
Keypad / and * with NumLock still fire weapon groups 1–3.

INSTALL / UNDO

Install WASD:

```
python3 patcher/hg_controls.py ~/Games/HeavyGear/prefix/drive_c/HeavyGear wasd
```

Undo (restore original):

```
python3 patcher/hg_controls.py ~/Games/HeavyGear/prefix/drive_c/HeavyGear original
```

Open the game’s own Controls screen and confirm changes and it rewrites INPUTW.MAP: run the install command again afterwards.
Replace the path with your own Heavy Gear folder if it differs. Changes touch INPUTW.MAP and GAMEKEY.MAP; originals are kept as .orig.
